Custom OEM ISO Program

This unique option allows you to get a skinned version of the FreePBX Distro. It includes changing the following areas of the FreePBX GUI:

- Landing page
- Top left logo
- Bottom footer

We start out by building you your very own ISO that is based off the FreePBX Distro ISO. All the upgrade scripts and upgrade paths for the FreePBX Distro still apply for your custom branded ISO. All FreePBX commercial modules are fully supported and can be purchased and installed on any of your systems.

Next we build a custom module that gets installed as part of the custom ISO we build for you.
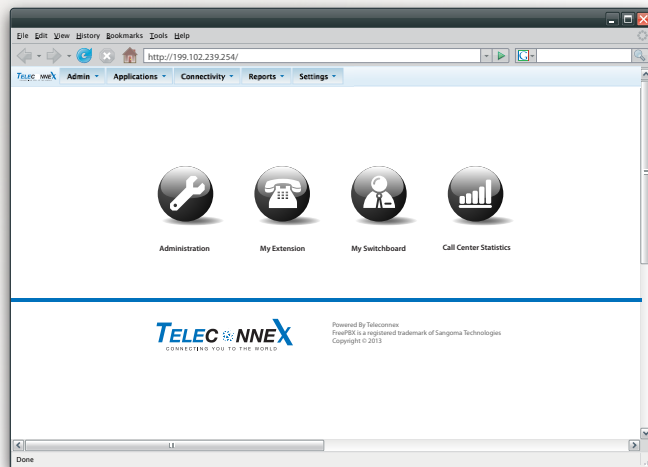

The standard OEM skinning package includes the following items:

- Your own branded landing page. You can have us remove any of the 4 options on the landing page such as the Support Icon or Operator Panel Icon. We can also direct the Support Icon to any Web URL that you choose. The Header and Footer of the Landing page will use the same ones you define for the Admin GUI. Optionally we can replace any of the 4 images on the landing page with your own provided Images or change the text for the 4 options such as "PBX Administrator".

- Replacement of the top left logo when logged into FreePBX admin and the ability to change the redirect to a website of your choice.

Custom OEM ISO Program

- Rearrange the names of the modules in the menu system and which categories they belong to.

  - Rename how the module shows up *(Asterisk SIP settings could be renamed SIP settings).*
  - Remap which categories each module is displayed under.
  - Add new custom categories.

Standard Menu Drop Down for Settings	Custom Menu Drop Down for Settings
Settings ▼ **User Panel**	**Settings** ▼
Advanced Settings	Advanced Settings
Asterisk API	CompletePBX API
Asterisk IAX Settings	Fax Configuration
Asterisk SIP Settings	General Settings
Extension Settings	IAX Settings
Fax Configuration	Music On Hold
Music On Hold	PIN Sets
PHPAGI Config	Parking Lot
PIN Sets	SIP Settings
Parking Lot	Switchboard Buttons
Route Congestion Messages	Switchboard Groups
Text To Speech Engines	Switchboard Permissions
Voicemail Admin	Switchboard Templates
	Switchboard Users

- Customize the footer of FreePBX GUI to display your information. The only requirement is the FreePBX copyright and trademark notice must stay in place.

By doing these changes as a skinning module it guarantees that when FreePBX receives updates your changes won't be lost. It also allows you to make more advanced changes to the colors used within the FreePBX GUI.

Additionally we can add and/or remove RPMs and packages you want changed at your custom ISO level.

Please note, it is not possible at this time to change the content within a module, for example on the system status where we see FreePBX System Status the word FreePBX can not be removed.   If we were to remove this it would be reverted back anytime a module is updated.

Custom OEM ISO Program Charges

- A one time entry fee that covers building your custom skinning modules based on what you send us for changes on the landing page, header and footer. It also includes setting up an ISO for your brand. An ISO will be generated anytime a new version of the FreePBX Distro is generated and available for download from our download site.

- Per year renewal fee after the first year.

- All other custom changes are billed at a reduced engineering rate.
